SCSC was thrilled to host members of Souderton Area High School’s Teach Girls Tech Club, including SCSC alumni Maria Souchet and Madura Dahale, for a coding event aimed at helping middle school girls understand drag and drop code and increasing their interest in computer science. Fifteen 5th - 8th grade girls took part in the event, using block coding to program Micro:bits, pocket-sized computers that introduce how hardware and software work together. The girls used programming logic to play games like Rock, Paper, Scissors and Hot Potato with the Micro:bits. The event definitely sparked an interest in computer science, and we hope to be able to host similar events in the future!
