

## **Willows 2nd Annual “Invention Convention”**

**Want to change the world? Become an inventor! After exploring famous inventors and inventions, students in the Willows set to work studying the concepts of force and motion in order to prepare themselves for the challenge of inventing.**

**With vocabulary such as force, motion, properties, gravity, and friction under their belts, teams were asked to invent a toy or other useful gadget; however, there was one caveat...the invention had to demonstrate the concepts of force and motion! After planning and building their inventions, teams then created advertising posters and hosted an “Invention Convention” to unveil their creations to the general public. A few lucky inventors even scored a windfall by securing sales of their items!**
